Subject Index

A

Abstracts
  2001 Transportation Science Section Dissertation Prize Competition, 133–143
Algorithms
  bilevel traffic management, 271–291
  flight-plans under workload, safety, and equity considerations, 378–397
  heuristic, auto-carrier transportation, 55–62
  resource allocation, 231–249
  traffic assignment, 398–417
  transtainer routing, 63–78
Allocation
  single leg, multifare seat problem, 349–353
Analysis
  transtainer routing, 63–78

C

Composite variables
  express shipment network design, 1–20

D

Distribution, 292–300
Dynamic fleet management
  single period travel times, 21–39
  multiperiod travel times, 40–54
Dynamic programming
  resource allocation, 231–249
  shortest path, transportation, 326–336

F

Fleet assignment, 199–217
Flows
  time-dependent, origin-destination, 184–198
  entropy solutions, traffic flow, 435–446
  stochastic optimal control approach, 418–434

H

Heuristics
  auto carrier transportation, 55–62
  inventory routing, 119–132
  search approach, 218–230
  vehicle routing, 250–269

M

Mixed-integer linear programming
  crane deployment, 79–93
Modeling
  airline operations, 357–377
  bilevel traffic management, 271–291
  crew scheduling, 337–348
  entropy solutions, hydrodynamic model, 435–446
  flight-plans under workload, safety, and equity considerations, 378–397
  itinerary-based airline fleet assignment, 199–217
  single link problem, 314–325
  stochastic network equilibrium, 149–166, 167–183

N

Network design
  express shipment service, 1–20
  time and cost-path problems in street networks, 326–336
Nonlinear programming
  fleet management, single period travel times, 21–39
  fleet management, multiperiod travel times, 40–54

O

Optimality, 349–353
Optimization
  crane deployment, 79–93

R

Route flow, 398–417
Routing
  branch-and-cut procedure, vehicle routing, 250–269
  delivery approximations for inventory routing, 292–300
  direct deliveries, 94–118
  arc, transshipment, 301–313

S

Scheduling
  airline crew with constraints, 337–348
  transshipment, 301–313
Single link problem, 314–325
  Stochastic mapping, 184–198
Stochastic modeling
  airline operations, 357–377
  optimal traffic signal control, 418–434
Stochastic network equilibrium
  theoretical foundation, 149–166
  solution method and numerical experiments, 167–183
Stochastic programming
  deterministic policies, 119–132
  inventory routing, 94–118
Stochastic shortest-path problem, 218–230
